AB - JP2002060714 NOVELTY - A removable pressure-sensitive adhesive composition consists mainly of (dry weight parts):

- (1) a natural rubber-vinyl monomer graft-copolymerized latex with a protein content (less than or equaling 0.1wt% on nitrogen basis) (100);

- (2) a filler (5-300);

- (3) synthetic resin emulsion (0-100); and

- (4) synthetic rubber latex (0-100).

- DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for sheets coated with the removable pressure- sensitive adhesive composition at 1-20g/m2.

- USE - The removable pressure-sensitive adhesive compositions are useful for post cards and envelopes.

- ADVANTAGE - The removable pressure-sensitive adhesive compositions don't cause blocking, when put one upon the other, adhered, when contact-bonded under a certain pressure or higher with improved adhesion strength with time after application and improved peel strength with time after adhesion, can be removed easily after adhesion and have low odor derived from natural rubber, high safety to allergy and high public health properties.
